Product Manager, Chrome Autofill

Dear Hiring Team,

Chrome Autofill saves users millions of hours every day — and the challenge of making form-filling smarter, more reliable, and privacy-preserving at scale is exactly the kind of high-impact product problem I want to work on.

At Munich University of Applied Sciences, I owned the full PM lifecycle for a document management system that digitized form-intensive workflows across 14 faculties, processing 200,000+ documents per year and reducing submission and processing time by ~30%. The parallels to the Autofill team's work — reducing form friction, at scale, with compliance requirements — are not lost on me.

Beyond that core experience, I bring:

- **Technical fluency:** Hands-on experience shipping web products gives me genuine appreciation for the constraints Autofill navigates — form heuristics, cross-origin policies, site variation, and ML-based parsing. I can engage with engineers on substance, not just slides.
- **User centricity:** Multiple colleagues describe my work as consistently putting the user first. I treat friction as a product defect, not an edge case.
- **Certified product frameworks:** PSPO I and PSM I; practiced in OKR-based roadmapping and data-driven prioritization.

I look forward to discussing how my background fits the Chrome Autofill team's roadmap.

Best regards,

Tristan Germer
